17+ Years in Tech

99% Infra Cost Cut

300K Peak Users Scaled

PROFESSIONAL SUMMARY

A hands-on systems architect and engineering manager with 17+ years building large-scale enterprise platforms and leading cloud-native modernization. Designs high-performance distributed systems on Azure, using well-known design patterns, containerization, and integrating AI coding agents into the development lifecycle. Builds and runs agile teams that ship secure, scalable products from architecture through code.

PROFESSIONAL EXPERIENCE

Hands-On Development Manager & Cloud Architect | [Smartlinx Solutions](#)

Jan 2025 – Jun 2026

- **Led architecture and hands-on development of a healthcare workforce-management and payroll web platform.**
- Translated product and business requirements into architecture designs that are cloud-native, covering both functional and non-functional requirements such as performance, availability, security, and compliance.
- Re-platformed a legacy monolith into a distributed-monolith architecture on Azure for 10,000 concurrent users, elastic to 35,000 and 300,000 active at peak, with SOC2 Type 2 PII protection across multi-tenant Azure SQL.
- Led a team of cross-functioning 11 developers and devops engineers, owning hiring and mentoring, using daily agile rituals.
- Helmed a BI project with a team of 4 data engineers and data scientists.
- Introduced LLM coding agents for code reviews, testing and documentation, lifting sprint velocity by 50% for 2-week sprints.
- Containerized services with Docker on Azure Container Apps.
- Designed BI pipelining for ingesting into Microsoft Fabric and Apache Iceberg, utilizing Snowflake in a medallion architecture.
- Modernized the system to include high-availability, strong resiliency and fault-tolerant services.
- Hands-on experience with agentic AI coding tools such as Claude Code, Google Antigravity, and Windsurf.

Systems Architect & Senior Developer | [PRA Group](#)

2011 – Dec 2024

- **Led migration of fintech systems for cloud-native architecture in .NET Core targeting scalability, and maintainability.**
- Led B2B projects enabling interfaces and reports between businesses, built on Microsoft Azure.
- Modernized WCF-based services with gRPC and Protocol Buffers, cutting network latency and payload size, enabling native streaming for terminal clients across Linux, macOS, and Windows.
- Helped to cut annual on-prem services cost from \$2M to roughly \$17K (\$12K setup plus \$400/month) by re-architecting a project onto Azure Blob Storage and Container Apps behind RESTful API.

EARLIER EXPERIENCE

Hands-On Server-Side Team Lead | [Secure Islands Technologies](#)

2009 – 2011

- Led a 4-engineer Agile team on a Data Loss Prevention product with SSAS-based BI for large organizations, in .NET 4.0.

Hands-On Development Manager | [Ness Technologies](#)

2009 – 2009

- Led an cross-functioning 8-person team delivering a governmental information system in .NET 3.5, BizTalk, and SQL Server.

Hands-On Team Leader | [AnyClip \(PopTalk\)](#)

2007 – 2009

- Led a full-stack 9-person team, building an application and website with social integrations, using WPF and ASP.NET

SKILLS

Architecture: Distributed Systems | Microservices | Event-Driven | DDD | SOA | CI/CD | High Availability | RESTful API

Cloud & Data: Azure | Docker | Kubernetes | NoSQL | SQL Server | Snowflake | Microsoft Fabric | Redis

Languages & AI: C# | .NET 8/10 | Python | Claude Code | GitHub Copilot | Prompt Engineering | Antigravity

Security: SOC2 Type 2 | PCI-DSS | Secure SDLC | PII Protection | HIPAA

EDUCATION & LANGUAGES

Education: Open University — Computer Science & Software Design

Languages: Hebrew (native), English (native-level reading & writing)

Military: Full service, Home Front Command, Communications & Computer Department
